

Topical Formulation for Winter Skin Relief

The Cold Takes a Toll

Plummeting winter temperatures, harsh winds and rising thermostats can wreak havoc on the moisture content of human skin. Many people are even prone to winter rashes, which can last all season long if not properly treated and cause redness, itching, flaking and blisters. There are a variety of topical solutions that can help protect the skin against dry and cracked skin caused by winter.

Repair, Protect, Prevent

Skin Moisturizers & Barriers

Healthy skin requires addressing common conditions like dryness and cracking. Moisturizing creams, barrier ointments, protectant creams, and protectant lotions that balance nature and science by incorporating raw materials and active ingredients in the formulation can be highly effective.

Skin Treatments

Conditions like eczema, dermatitis and other rashes may be worse during the winter, in part because of dry air coupled with indoor heating systems. Topical creams can often help reduce skin's redness, itching, and inflammation. Skin may also be more susceptible to fungal and bacterial infections, which can be treated with antibacterial and antifungal ointments.

Health & Beauty Aids

The harshness of winter can take a toll on the everyday appearance and texture of skin. Consumers benefit from the use of daily repair, protection and prevention products such as skin repair creams and sunscreen (SPF).

Cutting-Edge Capabilities

Scapa Healthcare's seasoned R&D team applies cutting-edge formulation capabilities and green chemistry towards the development of custom skin care topicals that are both safe and highly effective for the treatment of winter skin and other conditions. Our **Skin & Wound Care Technology Center** in Dallas, TX specializes in formulation and rapid filling of liquids, creams, gels, powders and waxes for professional and consumer applications.
