

How Hydrocolloid Blemish Patches Work

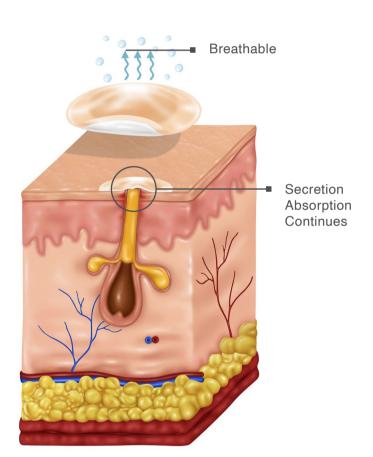

The hydrocolloid patch must be applied directly to the blemish to protect the effected and the surrounding area.

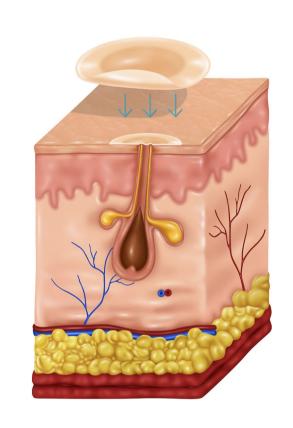

The patch absorbs secretions from sebaceous and sweat glands.

The occlusive nature of the patch helps protect the blemish from external contaminants. Upon removal, the patch adhesive helps to clear the affected area.

The hydrocolloid blemish patch can be used on a daily basis until the skin's condition improves.

Hydrocolloid Patch Benefits

- Reduces blemish size by absorbing secretions
- Helps reduce skin inflammation and redness
- Seals out water, bacteria and other external contaminants
- Helps avoid touching the affected area
- Can be worn day and night

Scapa Healthcare's highly qualified R&D team can work with you to develop custom skin-contact adhesive solutions to fit your market needs.
